DETAILED ACTION

Allowable Subject Matter

Claims 1-30 are allowed.

Claims 1-30 are allowable over the prior art of record for at least the reason that even though the prior art discloses birefringent optical devices comprising a sub-wavelength grating, the prior art fails to teach or reasonably suggest a birefringent device of substantially uniform thickness less than about 10 microns comprising a cap layer having an optical thin film being located substantially adjacent to the layer of periodic index regions of alternating refractive indices distal to the base substrate, as set forth by the claimed combination.

In Lee's device, layer 214 is a simple protective layer that is laminated onto the birefringent layer (lines 12-14, col. 5). In contrast, the claimed layer that is adjacent to the sub-wavelength grating of the device disclosed in the present application is an optical thin film, which is specifically designed (along with the substrate) to cancel successive reflections in the device, thus improving the optical throughput of the device.
